

CLATS LEARNING JOURNEY FLOW

LEARN → THINK → EARN → ADVANCE

Product: CLATS

Learning Pathways: Ages 2–5, 6–12, and 13–18

1. SELECT LEARNING PATHWAY

The child enters the **Learning Pathway** section.

Example:

AI & Smart Technology

Ages 2–5

The child sees the available modules.

2. SELECT MODULE

The child opens a module.

Example:

Module 1: Technology Around Me

The module displays its lessons:

- Lesson 1 — What Is Technology?
- Lesson 2 — Smart Things Around Us
- Lesson 3 — Technology at Home
- Lesson 4 — Technology at School
- etc.

Each lesson displays its status:

-  **Locked**
-  **Start**
-  **Continue**

- ✓ Completed
-

3. LEARN

Once the child clicks **Start Lesson**, they go **directly to the Learning Journey screen**.

There should be **no unnecessary overview or introductory screens** between selecting the lesson and beginning the lesson.

Learning Journey Screen

The screen contains:

Lesson Title

 **Video Lesson**

Progress Indicator

The child watches the lesson.

Requirement

The lesson must be completed before the child can proceed to the quiz.

The system tracks the child's lesson progress.

Once completed:

 **Lesson Complete!**

Then:

Continue →

takes the child to the quiz.

4. THINK

The **quiz** is the thinking and knowledge-check stage.

Number of Questions

Age Group	Normal Lesson Quiz	Final Module Challenge
2–5	3 questions	3 questions
6–12	3 questions	5 questions
13–18	5 questions	10 questions

The number of questions remains consistent within each age group, while the **complexity, language, and format** adapt to the learner's age.

Important

The quiz should assess **only what was taught in the lesson**.

The Module Challenge should assess learning across the **entire module**.

Quiz Structure

Questions should appear **one at a time**.

Example for ages 2–5:

Question 1 of 3

What is technology?

[Answer A]

[Answer B]

[Answer C]

Progress:

1 / 3 → 2 / 3 → 3 / 3

For ages 13–18, the same interface structure applies, but the quiz contains five questions.

Quiz Completion & Retry

A learner **does not need to answer every question correctly to advance**.

The purpose of the quiz is to check understanding and encourage learning, not to create a hard progression barrier.

If a learner does not answer a question correctly, the system should provide an appropriate **retry opportunity**.

The learner can retry and continue the learning journey.

5. EARN

After the learner completes the lesson quiz, the system automatically awards:

+10 XP

This is the **total lesson quiz reward**, regardless of the number of questions in the quiz.

For example:

 **Lesson Complete!**

 **You earned +10 XP**

The learner does **not** need to manually claim the XP.

The XP is automatically added to their CLATS account.

Module Challenge Reward

After the learner completes the **final lesson in a module**, they proceed to the Module Challenge.

Upon completing the Module Challenge:

+20 XP

is automatically awarded.

Therefore:

Normal Lesson Quiz → +10 XP

Module Challenge → +20 XP

6. REWARDS SCREEN

The newly earned XP automatically reflects in the child's **Rewards** page.

For example:

Previous XP: 450

Lesson Quiz Reward: +10 XP

New XP: 460

The Rewards page can display the learner's existing CLATS reward information, including:

- Total XP
- Badges
- Achievements
- Streaks
- Other CLATS rewards

The learner should not have to manually enter or claim the XP.

7. ADVANCE

Once the child has:

- ✓ Completed the lesson video
- ✓ Completed the lesson quiz
- ✓ Received the +10 XP reward

the lesson becomes:

COMPLETED

The next lesson becomes available according to the pathway progression rules.

Example:

Lesson 1 — What Is Technology? ✓

↓

Lesson 2 — Smart Things Around Us

The child can now continue their learning journey.

8. FINAL LESSON & MODULE CHALLENGE

The **final lesson of each module** follows the normal lesson flow.

After the learner completes that final lesson's quiz, the **Module Challenge** becomes available.

Module Challenge

Age Group	Questions	Reward
2–5	3	+20 XP
6–12	5	+20 XP

13-18

10

+20 XP

The Module Challenge should test the learner's understanding of the **lessons covered throughout that module**.

It should not introduce completely new material.

After completing the Module Challenge:

 **Module Complete!**

★ +20 XP

The module is marked complete and the next module can be unlocked according to the pathway progression rules.

MODULE COMPLETED

NEXT MODULE UNLOCKS

9. WHAT HAPPENS TO THE GAMES?

The **Games section remains completely separate** from the core lesson progression.

Games can reinforce concepts across the learning pathways without being required to complete an individual lesson.

For example, after learning several lessons about technology, the child might visit:

Games

and play:

- Technology Matching
- Smart Device Memory Game
- Technology Sorting
- AI Pattern Challenge
- Coding Games
- etc.

This keeps the functions distinct:

Lessons = Structured learning

Quizzes = Knowledge checks

Games = Additional interactive practice

Rewards = Motivation and progression

The child's Learning Companion can also be experienced through the broader **Games section** rather than being inserted into every individual lesson.

10. STANDARD PRODUCT RULE

Every CLATS lesson should follow the same fundamental structure:

LEARN

Watch and complete the lesson.

↓

THINK

Answer the age-appropriate lesson quiz.

↓

EARN

Automatically receive **+10 XP**.

↓

ADVANCE

Unlock/proceed to the next lesson.

At the end of the module:

MODULE CHALLENGE

Complete the age-appropriate challenge.

↓

EARN

Automatically receive **+20 XP**.

↓

MODULE COMPLETE

Proceed according to the pathway progression.

FINAL CLATS LEARNING ARCHITECTURE

LEARN → THINK → EARN → ADVANCE

The **Games section is complementary, not a mandatory step in the lesson journey.**

This is the standard architecture across **ages 2–5, 6–12, and 13–18**, with the content, difficulty, question format, and assessment depth adapted to each age group.
